

Quest Engineering & Failure Analysis, Inc. is utilizing 3D Scanning as part of our regular scene and vehicle documentation. This 3D Scanner allows Quest to capture the exact three dimensional shape of any vehicle or scene, producing a 3D virtual computer generated model. The addition of the 3D Scanner will not only provide scientific accuracy, but will also provide jurors with visuals that are rarely seen in the courtroom. The ability to demonstrate scenarios in 3-Dimensional space will allow complex concepts to be easily grasped.

- Captures millions of data points
- Millimeter accuracy
- Captures exact evidence location and geometry
- Allows 3D tours of evidence
- Allows exact machine generated 3D models
- Provides exact damaged vehicles for animation
- Indefinite evidence preservation
